

Sustainability Services for Financial Market and Governance

Tetra Tech develops from the analysis of socio-environmental data to the preparation of reports and the application of questionnaires for the financial market or internal governance.

Due Diligence, Questionnaires and Social and Environmental Performance Reports

Tetra Tech works in an integrated and collaborative way with its clients in the assessment of compliance, production of reports and questionnaire responses from studies Due Diligence, Equator Principles, IFC and CDP, in addition to Sustainability Reports (in accordance with the guidelines GRI). We operate in risk management, assessment and monitoring environmental, social and governance (ESG). Through good practices and diverse requirements we continuously monitor the socio-environmental performance of enterprises.

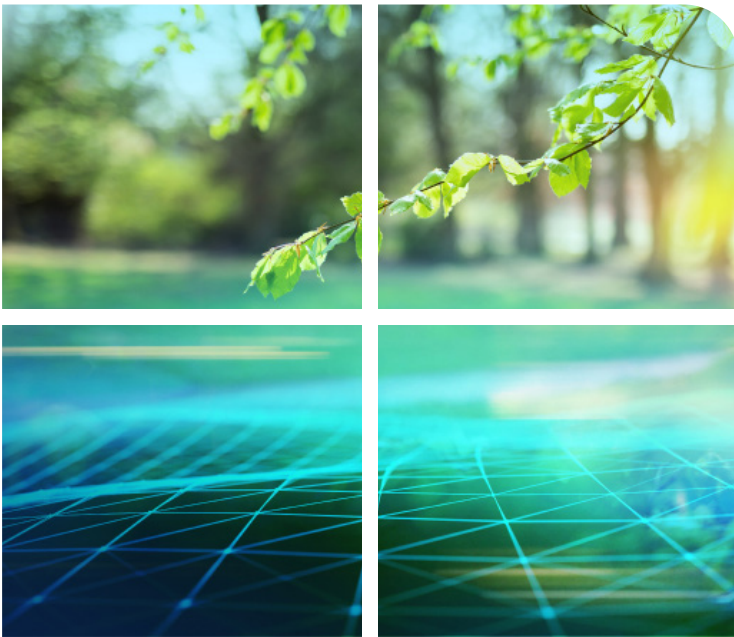

Due Diligence assessment for investment in any acquisition allows the investor a clear view of the project's environmental and social liabilities and assets. In the case of financing and insurance analysis, we provide full support to the diagnosis and implementation of the necessary actions to meet the requirements. We also support the response to questionnaires such as those from CDP and ICA. We develop performance and sustainability reports based on the requirements required by the applicable or institution, such as the GRI.

Due Diligence

The execution of socio-environmental Due Diligence audits aims to:

- Identify social and environmental liabilities for projects
- Quantify and qualify financially the socio-environmental risks
- Collaborate in decision-making on socio-environmental issues in investments

The analysis of socio-environmental investment risks provides tools for decision making.

Sustainability / Social and Environmental Reports and Questionnaires

Our team of experts provides support throughout the development and reporting process and questionnaires.

Performance and Sustainability Report (GRI)

From the definition of content, quality and limit, we carry out the complete process of preparing content for reports, including supporting the data collection team, consolidating and writing and reviewing the Performance / Sustainability Report. We present our reports on online Dashboards using the Power BI tool.

Diagnostics and Action Plan to meet requirements

Based on the Equator Principle, IFC and Corporate criteria, we carry out diagnostics to identify failures with support for the adequacy of operational and strategic activities. We also work to support to attend audits and prepare applicable reports.

Miscellaneous index and reference questionnaires

We prepare and support the response to the self-assessment questionnaires of indexes and indicators of public and private interest organizations, such as CDP, PNQ and ICA.

Second Opinion

We carry out evaluations and support improvements on reports, audits and questionnaires produced by third parties.
